EDUCATION

Montclair State University

Bachelor of Science in Computer Science

Montclair, NJ

Graduated, May 2026

PROJECTS

Flagship – Feature-flag control for small teams. | *Python, MySQL, React*

April 2026 – Present

- Built a full-stack SaaS platform for feature flag and release management, enabling small engineering teams to safely control deployments and reduce production risk.
- Developed a custom dashboard for managing projects, feature flags, and rollout workflows across different environments.
- Designed and implemented backend API routes to handle project data, waitlist functionality, and future feature flag operations.
- Architected the system for Supabase/PostgreSQL integration, supporting scalable, persistent storage for authenticated users and project data.
- Focused on production-safe release workflows, including planned support for environment-based controls and kill switches.

Beacon — Client Portal SaaS for Creative Teams | *React, Vite, Node.js, PostgreSQL*

April 2026 – Present

- Built a calm client workspace for agencies and freelancers to manage updates, deliverables, approvals, files, and next steps in one shared portal.
- Developed authenticated dashboard, project setup/settings flows, and invite-based collaboration features to support multi-client workspaces.
- Added inbox triage and Outlook integration scaffolding to prioritize urgent client requests and reduce status-chasing.
- Designed and integrated a PostgreSQL/Supabase-backed relational database for client portals, projects, invitations, and workspace activity, supporting authenticated collaboration and persistent client data.

Personal Website | *Python, CSS, JavaScript, HTML, Firebase, React*

Sep 2025 – Present

- Designed and developed a responsive personal website to showcase projects, technical skills, and experience.
- Integrated Firebase backend services for hosting, authentication, and scalable data management.
- Built with React for a dynamic, component-based UI, improving maintainability and user experience.
- Implemented modern UI/UX design principles, including responsive layouts and interactive elements.
- Utilized GitHub for version control, feature tracking, and iterative development.

RELEVANT COURSEWORK

Software Engineering

- Acquired hands-on experience in software development principles, including requirement analysis, system design, and implementation using industry-standard practices.
- Gained knowledge in developing, testing, and debugging software to ensure functionality and maintainability, with a focus on teamwork and collaboration.

Computer Security

- Developed a strong security-first mindset by exploring how incomplete engineering assumptions lead to real-world cyberattacks across Software Security, Network Security, Web Security, and Cryptography.
- Investigated network security concepts through a dedicated lab covering topics such as packet sniffing, spoofing, and TCP/IP attacks, reinforcing knowledge of how adversaries exploit protocol weaknesses.
- Analyzed web security threats including session hijacking and cookie-based attacks through lab work and quizzes, building practical understanding of common web vulnerabilities.
- Studied cryptographic principles and their role in securing communications, and applied concepts in a pen-and-paper final exam covering the full breadth of course material.

TECHNICAL SKILLS

Languages: Java, Python

Developer Tools: Git, Docker, Google Cloud Platform, VS Code, AWS

Technical Skills: IT, Windows/Operating Systems, Troubleshooting Hardware/Software
